

A client asks for an item in the market factory. The market factory inspects his bank account information to see if the client has the necessary money to pay for it. Otherwise, the order would be rejected

```
cost = int(input("this article costs:\n"))
money = int(input("How much money
do you have?\n"))
cambio = money-cost
```

```
if(money >= cost):
    print ("transaction accepted, thanks
for buying with us")
```

```
else:
    print ("transaction rejected,    come
back when you're a little
mmmm...richer")
```

```
if(money >= cost):
    print("you have $", cambio, "left")
```
